Summary

Backend Engineer with 5+ years of experience building business-critical web systems and internal workflow automation. Experienced in database performance optimization, legacy system **refactoring**, transactional integrity, and system reliability, with recent hands-on delivery of an AI-powered invoice reconciliation workflow on Azure covering mailbox ingestion, AI-assisted parsing, invoice matching, dashboard-based review, and automated email workflows. Currently based in Australia and seeking long-term backend engineering opportunities, with additional strength in AI automation and business workflow integration.

Core Skills

Backend	PHP, Laravel, Node.js, NestJS, TypeScript, RESTful APIs, background jobs
Frontend	JavaScript, React, dashboard/admin UI development
Data / Infra	MySQL, PostgreSQL, Redis, Docker, Linux, Nginx, Azure VM
Integration	Microsoft Graph API, mailbox automation, AI integration, Git Workflow

Experience

Barden Farms

AI Engineer / Casual IT Developer

04/2026 - 06/2026

Gatton, QLD

Australian produce business. Built and deployed an AI-powered invoice reconciliation workflow for Nolan's Transport, automating transport mailbox intake, PDF invoice parsing, matching, review, and outbound email delivery.

Portfolio Case Study · AI-Powered Transport Invoice Reconciliation Workflow

Professional reference from Barden Farms available upon request.

- Developed an end-to-end automation pipeline that ingested transport invoice emails, extracted PDF data with AI, matched invoice items against business records, and sent approved results through an Azure mailbox flow.
- Built dashboard views for mail sync status, background job execution, AI agent processing, token usage, and invoice review outcomes.
- Integrated **Microsoft Graph API** for mailbox synchronization and automated email delivery across shared business mailboxes.
- Deployed a working demo environment on **Azure VM** with **Nginx**, designed to reduce manual reconciliation effort by approximately **70%** once adopted.

ASUS (via Cheng-Lin Innovation)

Backend Contractor

01/2025 - 06/2025

Taipei, Taiwan

Global leader in electronics, managing large-scale, multi-regional B2C e-commerce platforms.

- Developed an automated i18n validation tool to sync Google Sheets with production data, implementing a **Levenshtein-based heuristic** to filter minor punctuation updates and ensure **100% content consistency** across multi-regional platforms.
- Refactored** subqueries and used **EXPLAIN** plan analysis to optimize database queries for order analysis, achieving a **60% speed improvement**.
- Resolved **Dirty Read** errors in cross-database environments by synchronizing transaction states across connections and preventing race conditions during complex joins.

Experience Continued

- 

JGB Smart Property

Backend Engineer

09/2023 - 12/2024
Taipei, Taiwan

Leading PropTech SaaS provider specializing in automated rental management and financial solutions.

 - **Refactored** a high-coupling model layer with severe **N+1** query issues by redesigning API data, indexing, denormalization, and **Redis caching**, reducing latency from **10s to <1s** and improving throughput by **40%**.
 - Built an **action logging system** to improve traceability of financial records and payment / contract data, cutting debugging time by **60%+**.
 - Initiated a **Technical Debt Backlog** in Monday.com to track and prioritize legacy code issues during rapid product iterations.
- 

Columbia Consulting Company

Full Stack Engineer

05/2022 - 08/2022
Taichung, Taiwan

Premier EdTech platform offering real-time English consultancy and language learning services.

 - Assisted a phased technical migration from **.NET to PHP** for back-stage systems, establishing a stable development environment and ensuring data synchronization during the **three-month** transition.
 - Developed a teacher-material-student **matching system**, reducing manual matching time by **70%+**.
- 

Mitowngame

Full Stack Engineer

04/2017 - 04/2022
Taichung, Taiwan

High-concurrency gaming platform provider specializing in secure financial and wallet integrations.

 - Developed and maintained a gaming platform integrating third-party providers and API batch processing, ensuring **600k** betting records ran smoothly each month.
 - Developed LINE group gaming workflows and LINE **chatbots** with live streams, parsing betting keywords and handling **3k** bets per day.
 - Implemented low-latency live streaming using **WebRTC** and built a **WebSocket** server for real-time communication and event-driven processing.
 - **Led a small team** while contributing as a developer, handling client communication, project planning, and task coordination.

Education

- #### National Chi Nan University

Bachelor in Computer Science and Information Engineering

09/2012 - 07/2016
